Map 104 seems acceptable.

Of the maps made by consultants, I think the NDC Green map is best.

But I don't feel like I have a good grasp of the greater implications for any map. I saw a counsel meeting where many of the details were explored. Still there are so many variables and I'm not sure anyone really knows what map would lead to the best outcomes.

I live in mills park neighborhood. I want to see the city adopt more human oriented infrastructure (like bike lanes, better transit, and more mixed-use development).
